Course Description

This course emphasizes the practices and principles shared by all photographic media but working with digital camera devices. You will learn camera operations, including proper exposure, depth of field, motion blur, and the use of lenses. We will also explore the principles of perception, light, color, composition, and visual awareness and how these elements are used to create a successful image. The foundation of photography is accomplished by a productive work routine of shooting and looking at other photographers' work.

Essential concepts and history will be discussed through lectures and presentations while students continue shooting based on assigned and your own theme, followed by reviews. You are encouraged to employ your aesthetic, intellectual, and emotional concerns as a basis for your photographic expressions.

Student Learning Outcome

Students will interpret and utilize the photographic medium as a means of communication.
